# Statements and Conditions

RIPHAH  
INTERNATIONAL  
UNIVERSITY

C++ has only three kinds of control structures, or control statements and three types of repetition statements.

# Control Statements

- 1) if
- 2) if...else
- 3) switch

# Repetition Statements

- 1) while
- 2) for
- 3) do...while

# if statement

```
if ( grade >= 60 )  
    cout << "Passed";
```

# if and else

```
if ( grade >= 60 )  
    cout << "Passed";  
else  
    cout << "Failed";
```

# If else (continue)

```
if ( studentGrade >= 90 ) // 90 and above gets "A"  
cout << "A";  
else if ( studentGrade >= 80 ) // 80-89 gets "B"  
cout << "B";  
else if ( studentGrade >= 70 ) // 70-79 gets "C"  
cout << "C";  
else if ( studentGrade >= 60 ) // 60-69 gets "D"  
cout << "D";  
else // less than 60 gets  
cout << "F";
```

# Switch statement

```
switch ( grade ) // switch statement nested in while
{
case 'A': // grade was uppercase A
cout<<"Student has A Grade" << endl;
break;
case 'B': // or lowercase a
cout<<"Student has B Grade" << endl;
break; // necessary to exit switch
default:
break;
}
```

# while Repetition Statement

A repetition statement repeats an action while some condition remains true.

```
while ( product <= 100 )  
product = 3 * product;
```

# do .. while (loop statement)

```
do
```

```
{
```

```
cout << counter << " "; // display counter
```

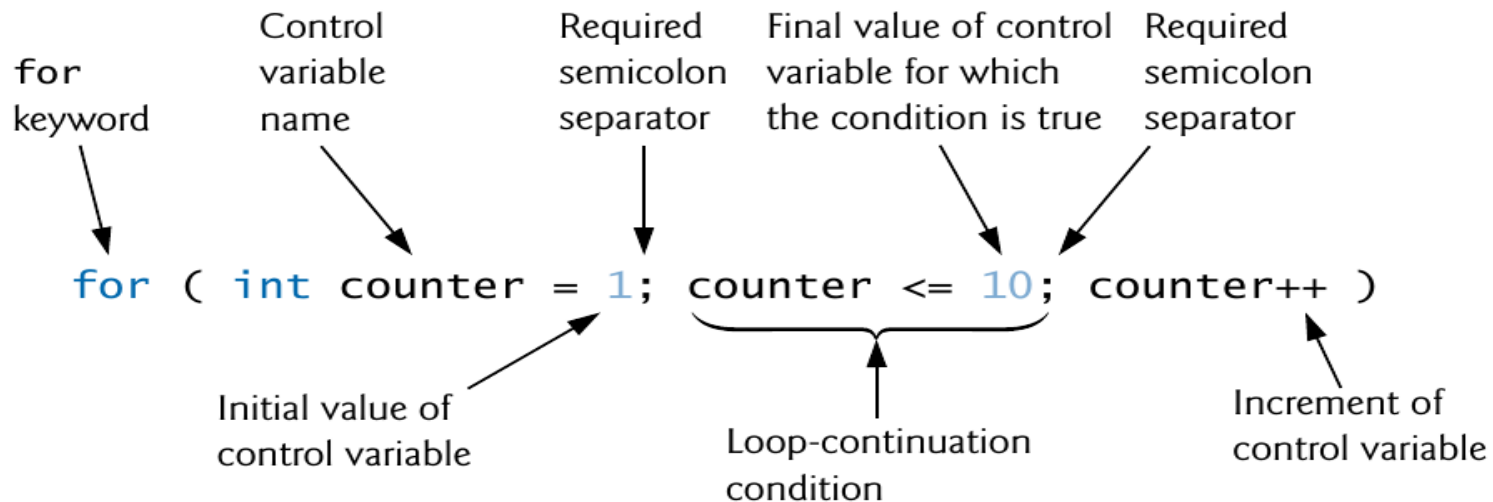

```
++counter; // increment counter
```

```
} while ( counter <= 10 ); // end do...while
```

# for loop - Repetition Statement

// loop-continuation condition and increment.

```
for ( int counter = 1; counter <= 10; ++counter )  
cout << counter << " ";
```

Make a structure of cars having 3 data types. e.g.

1. Model\_name
2. Year
3. Price
4. Manufacturer\_name
5. Color
6. Car\_type
7. Company
