

Selection of Right Tools and Technologies

Tassadaq Hussain Cheema

**Ph.D. Supercomputing and AI
Professor at University of Sialkot
Pakistan Supercomputing Center, Islamabad
Barcelona Supercomputing Center, Spain
www.tassadaq.ucerd.com**

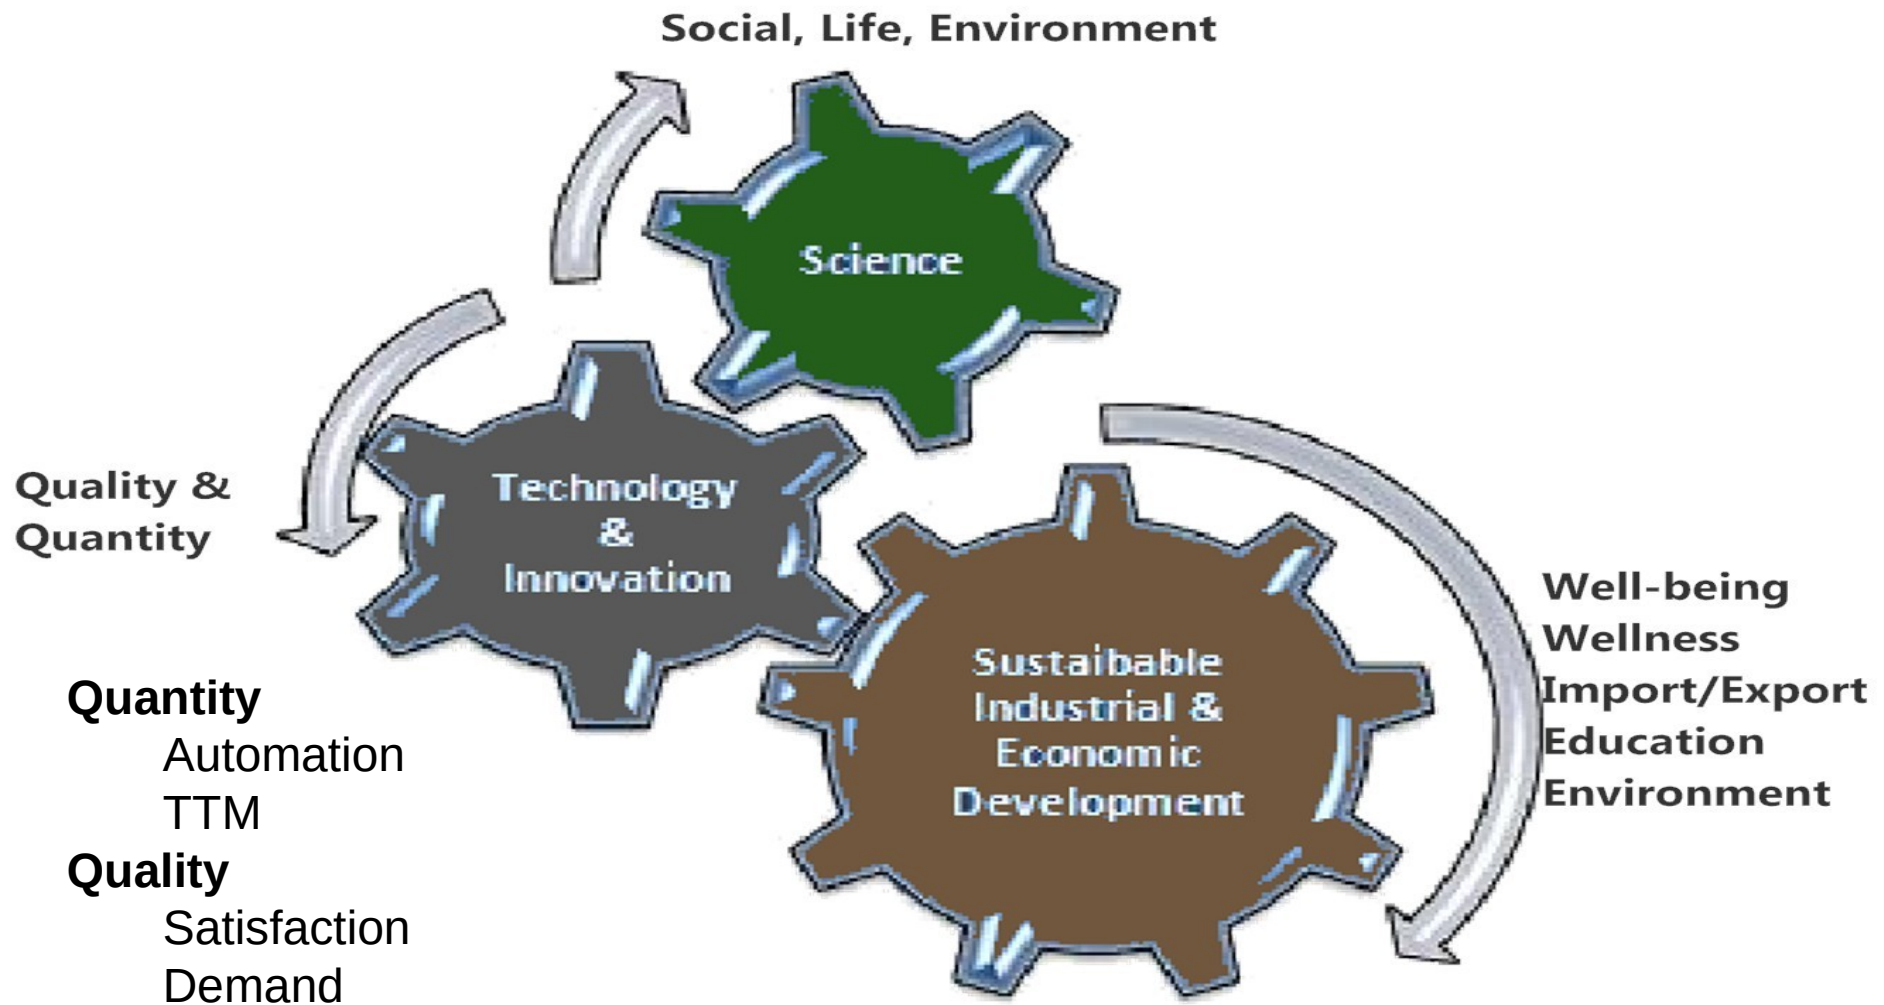

Previous Session

- **Identify Challenge Having Impact for Research**
- **Integrate Technological Solution (Emerging Tech)**
- **Apply Bottom-Up Approach for Solution**

Agenda

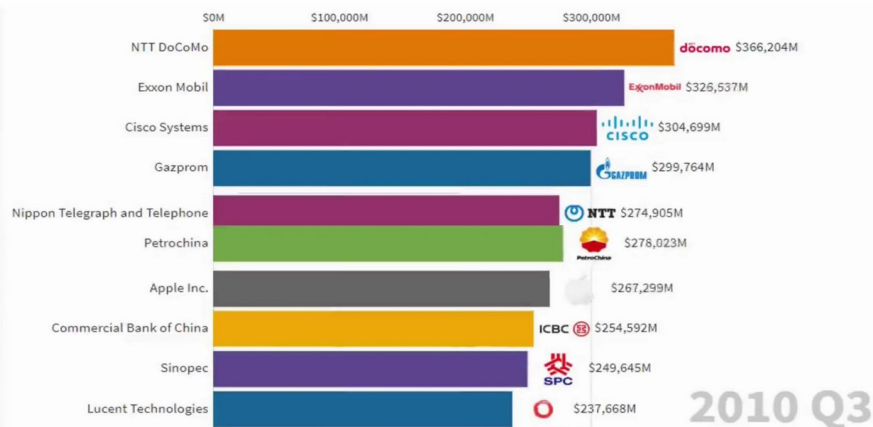

- **Identify Impact based Research**
 - Identify Challenge Having Impact for Research
 - Integrate Technological Solution (Emerging Tech)
 - Apply Bottom-Up Approach for Solution
- **Selection of Tools and Technologies**
- **Success Stories**

Sustainable Industrial and Economic Development

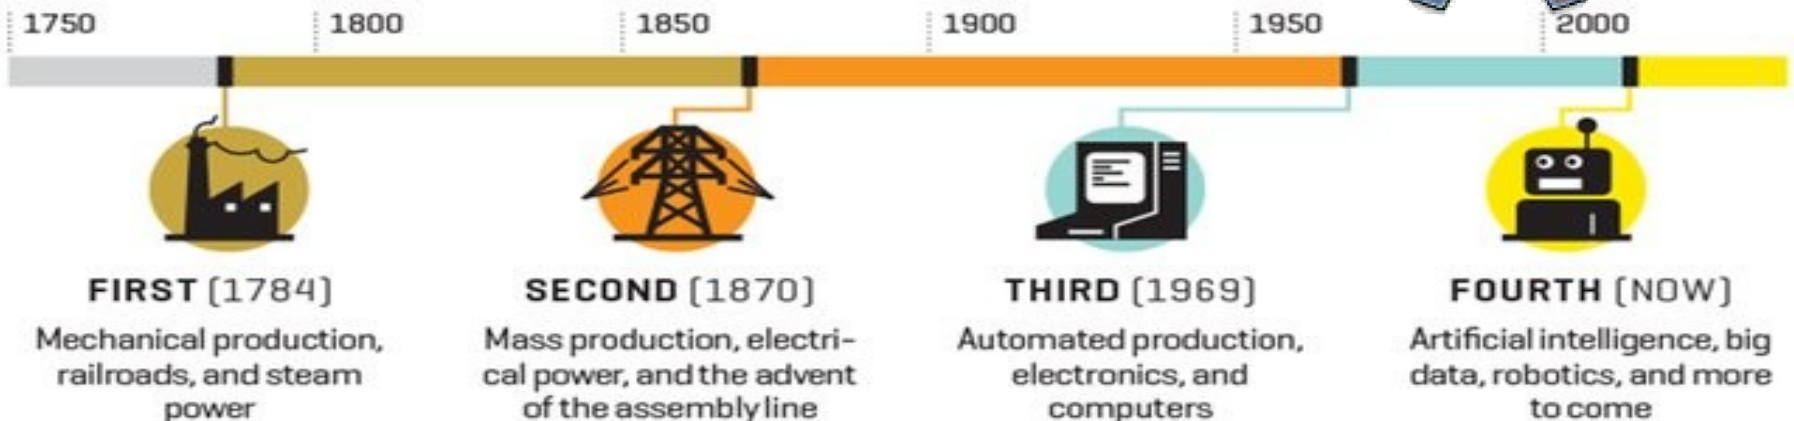

Industrial Revolutions and Sustainable Developments

Top 10 Biggest Companies By Market Size From 2010 - 2020

PakistanSupercomputing.com

Computing Technology

Fermi National
Accelerator Laboratory

Includes particle physics and accelerators

Particle Physics

QUARKS

Includes all of cosmology, astrophysics

Cosmology

BIG BANG

Processing, Internet etc

Computing

ICT

DNA here is all of biology

Biology

DNA

Includes geology and all of planetary science

Space

SPACE

“ Machine intelligence is the last invention that humanity will ever need to make ”

Nick Bostrom

Philosopher, University of Oxford

Industry

Environment

Humans

17 goals on the United Nations' 2030 Agenda for Sustainable Development:

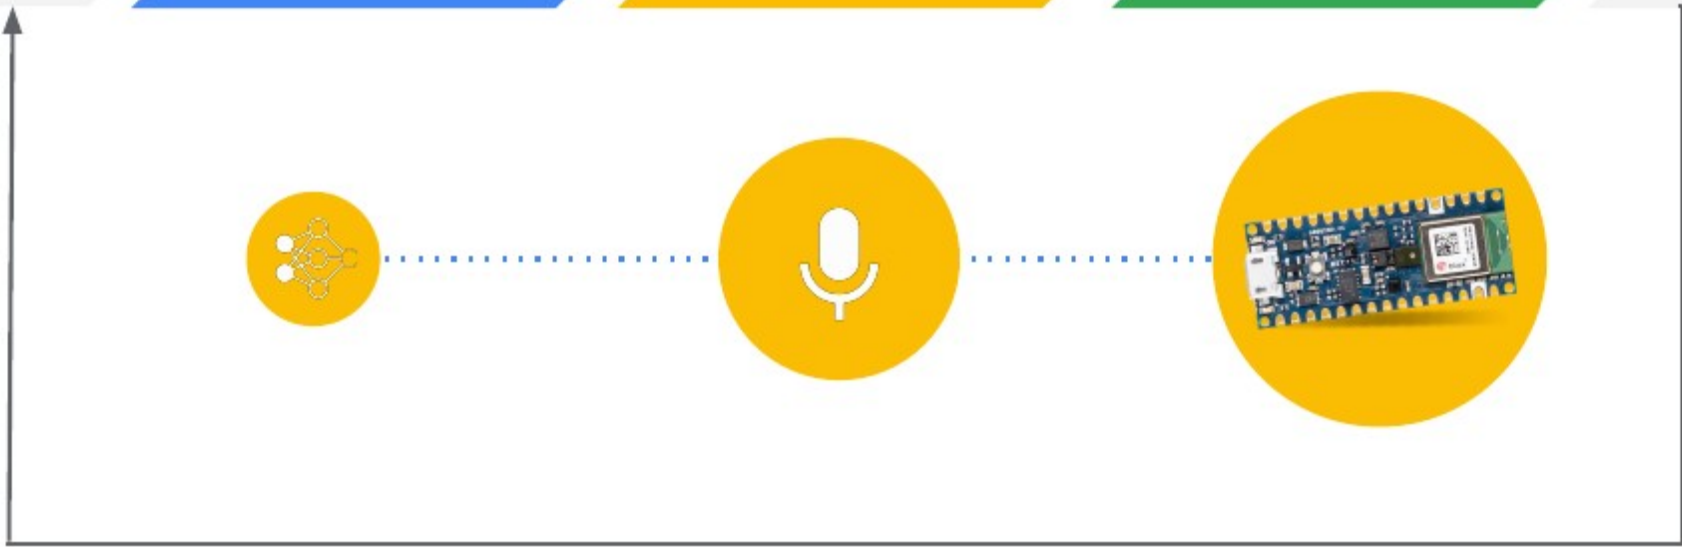

- Ending poverty and world hunger
- Improving health and education
- Reducing inequality and injustice
- Clean water and sanitation
- ... etc.

Tech Issues

Microsoft ChatBot (Twitter – Offensive Content)

Amazon Secret AI Recruiting Tool (Biased Against Women)

Google Calls (2019) Hidden Microphone in its Nest Home Security Devices an ‘Error’

Digital Industrial Age
5.5 Trillion \$ Revenue@2021

Tools and Technologies for Sustainable Research and Development

- Standards, Compliance and Regulation
- Data Architecture
- Software Architecture
- Hardware Architecture
- User Interactive Interface

Grading

- Domestic
- Industrial
- Medical
- Military
 - Design Characteristics
 - Sophisticated Wear Leveling, Defect Management and Error Checking & Correction (ECC)
 - Write Endurance
 - Supported Temperature Ranges
 - Product Life Cycles
 - Unexpected Power Interrupt Handling

Compliance and Regulation

REGULATION

Regulation Bodies

Communication Commission

Information Commission (Data)

Health Regulator Authority

Data Architecture

- Standardized (Structure)
- Easy Handling
- Flexible for new entries
- Adoptable
- Portable

Software Architecture

- Tool Chain
- Algorithm Control Data Flow
- Accuracy
- Performance Scalable
- Portable

Hardware Architecture

- Targeted Technology
 - Required Performance
 - Embedded, Bare-Metal, Cloud
- Programmability
- Fault Tolerance

User Interactive Interface

- Usability
- Accessible
- Infographic

Agenda

- Identify Impact based Research
- Selection of Tools and Technologies
- **Success Stories**

Int'l Projects

- Design Ultra Low Cost Display Camera Interface for Mobile Baseband XGold Chip
(Infineon Technologies, 200 million single chip)
- Implementation of Reverse Time Migration on FPGAs
(BSC-REPSOL, PLDA Italia, Cambridge Science Park)
- Open source European full-stack ecosystem based on a new RISC-V CPU
(Barcelona Supercomputing Center)

National

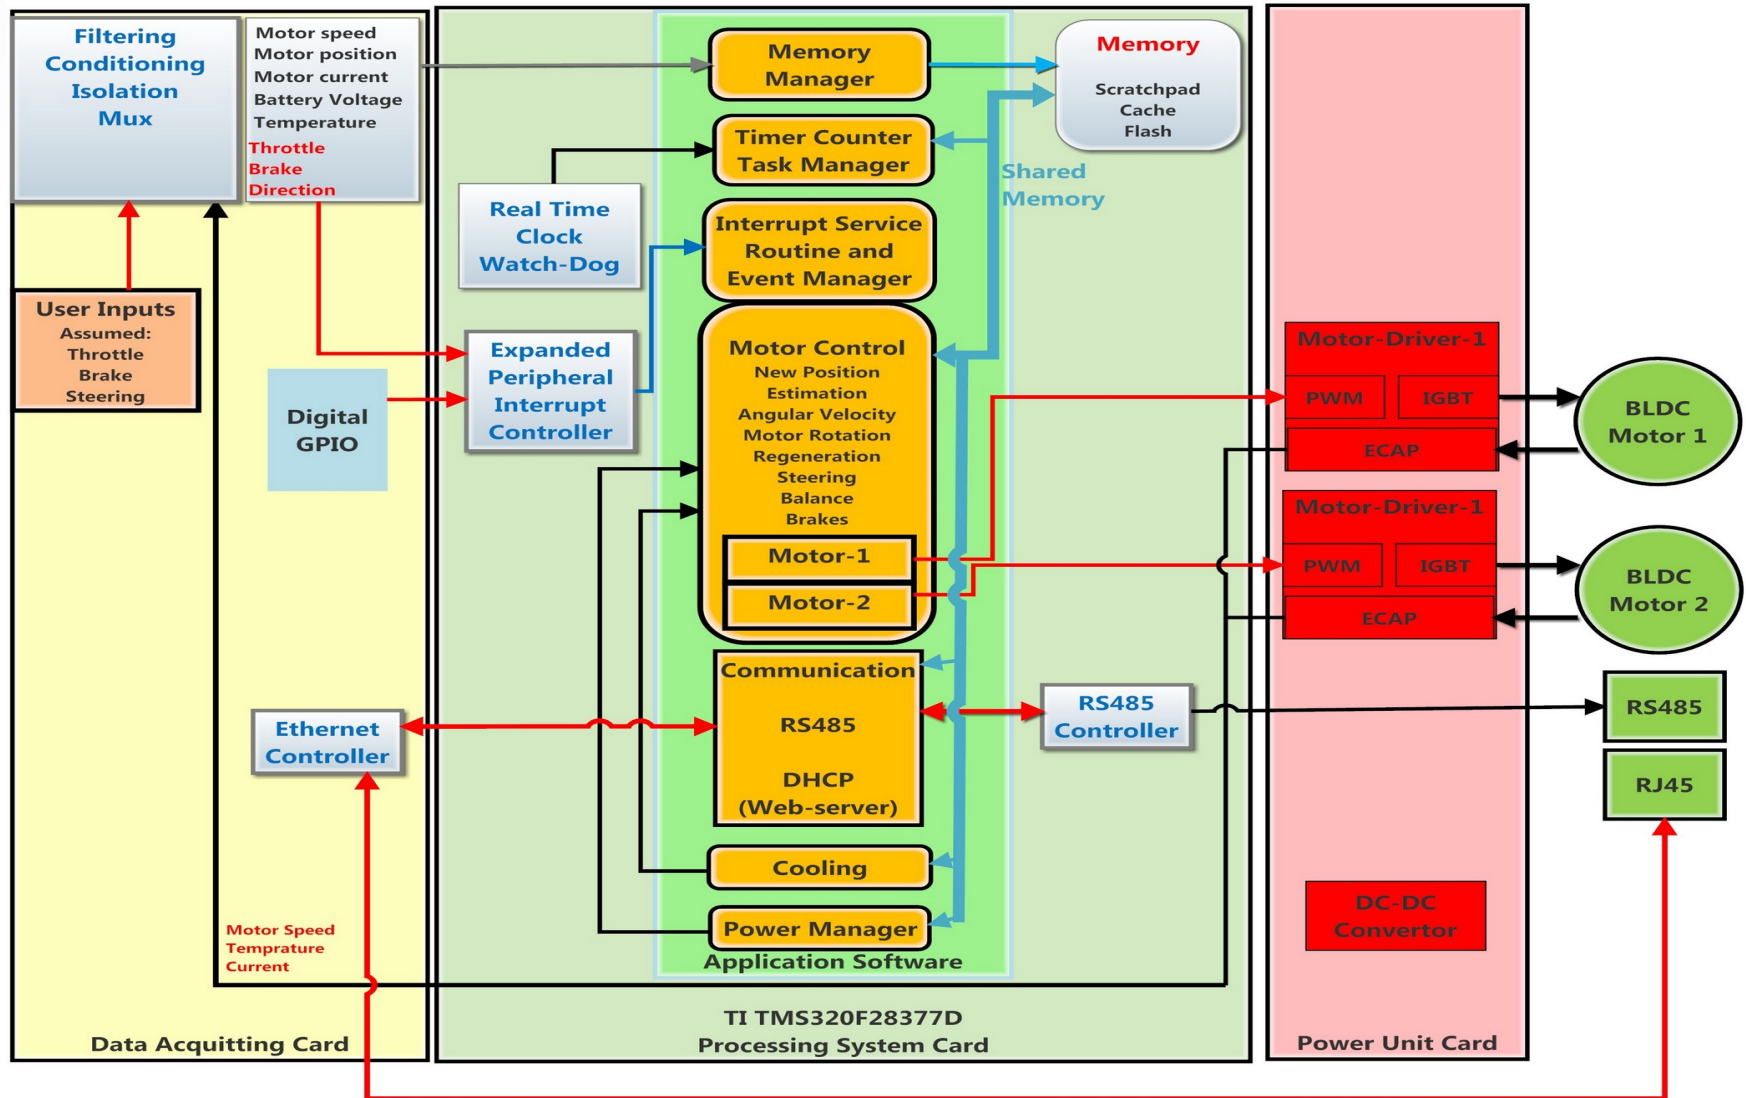

- Smart Motor Controller
- FootAnalytic
- Rice Sorting Machine
- Low Power and Low Cost Supercomputing System

Smart Motor Controller

Proposed BLDC	Power Factor	Manufacturing	Revenue (Billion PKR)	Energy Reduction Mega Watt Hour
Improves	85-90%	4 Million = With 50% of Production	20 = With 40% Increase	720 = With 30% Power Saving

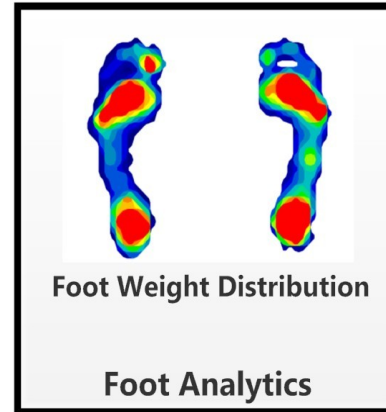

Working Investment	15000000
Capital Investment	10000000
Average Product Price	1477.265625
Average Sale Price	1934.816
Average Gross Profit/Year	19.42987936
Total Gross Profit (5 Years)	97.1493968
ROI	4%
IRR	54%
NPV	10,028,468
Pay Back Period	3.16

Smart Motor Controller

Foot Analytic

Recommendations
Exercise, Diet etc.

Orthoses
Foot Sole, Support Belt, etc.

Recommendation
Medical Procedures

Decisions

Years	1	2	3	4	5
No of Unit Produced	20	100	150	200	250
Unit Product Price	30,000	35,000	40,000	50,000	60,000
Unit Sale Price	50,000	60,000	75,000	80,000	100,000
Services (Renting)	500,000	1,000,000	1,500,000	2,000,000	2,500,000
Cost of Production	600,000	3,500,000	6,000,000	10,000,000	15,000,000
Revenue	1,500,000	7,000,000	12,750,000	18,000,000	27,500,000
Operational Cost	500,000	500,000	1,000,000	1,200,000	1,500,000

Supercomputing System

**PAKISTANTM
SUPERCOMPUTING**

Chip
4 cores

XEON Processor

System
10 Cluster
(Up To 500 TFLOPS)

Cluster
5 Server Node (Up To 76 TFLOPS)
Infini Band

Server Node (upto 20 TFLOPS):
48 cores
96 GB RAM
1 TB Disk
2 GPUs

CentOS Linux

**Barcelona
Supercomputing
Center**

Centro Nacional de Supercomputación

• Applications:

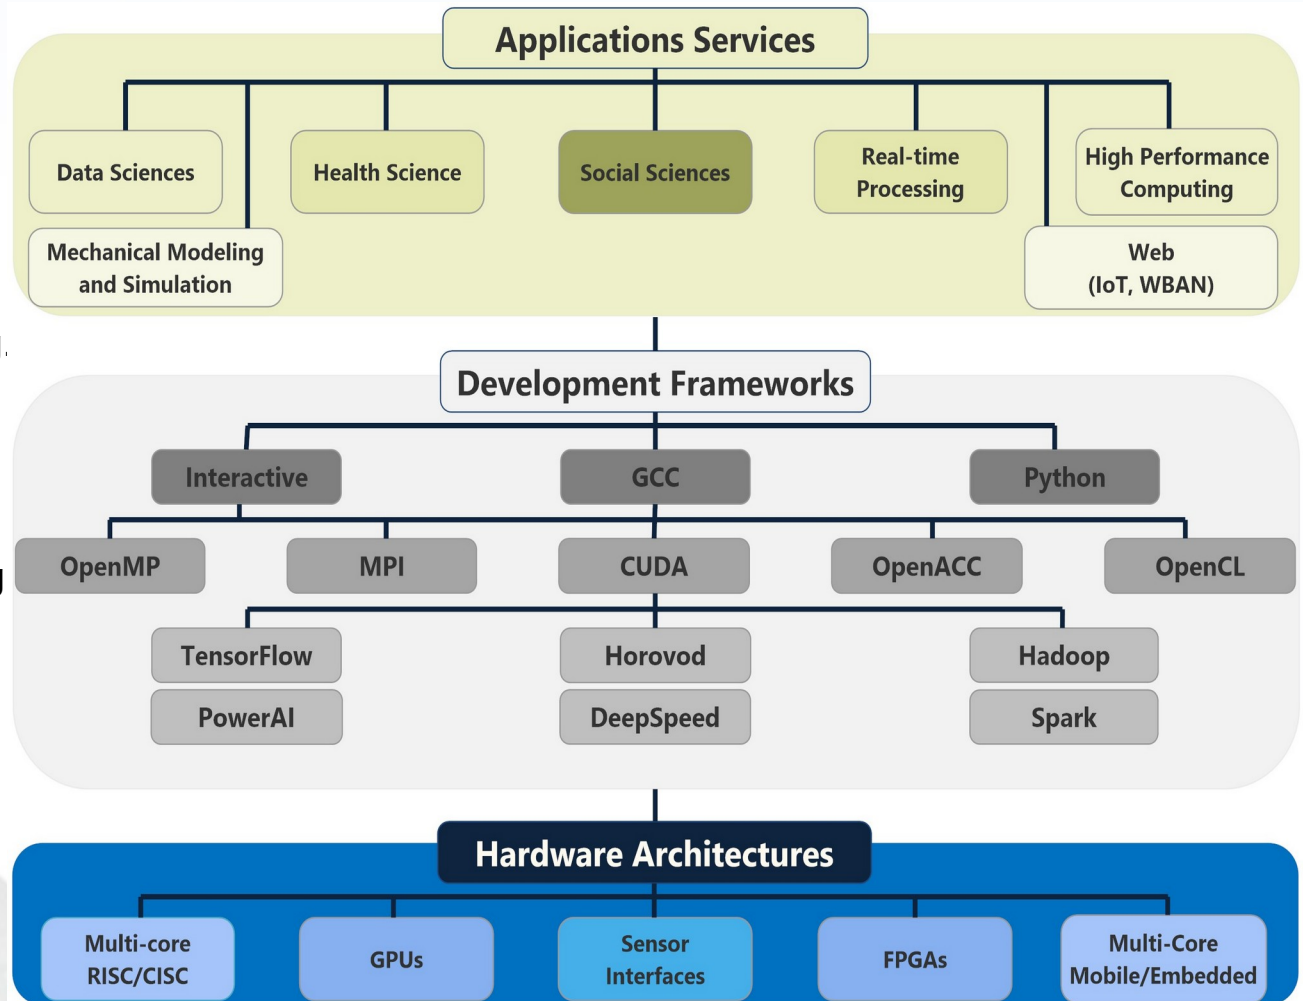

- Data Sciences
- Artificial Intelligence
- HPC
- Simulation & Modeling.

• Targeted Hardware:

- Cloud-Computing
- Super-Computing
- Embedded-Computing

• Salient Features:

- Time-Critical
- Accurate
- High Performance
- Virtual & Bare-metal

Thanks: How To Do Commercializable Research

Intelligent Algorithms

- Sensors Inputs (x) = Algorithm = Decisions Outputs (y)
- Data (x) = Program = Outputs (y)
- (Labeled) Outputs (y) = F (x) (computation) => **Program**
- F (x) = Training Models
 - Accuracy
 - Performance

Synergy: Science and Technologies

Funding Sources

Partners

Computer Sciences

To influence the way machines are built, programmed and used: programming models, performance tools, Big Data, computer architecture, energy efficiency

Earth Sciences

To develop and implement global and regional state-of-the-art models for short-term air quality forecast and long-term climate applications

Life Sciences

To understand living organisms by means of theoretical and computational methods (molecular modeling, genomics, proteomics)

CASE

To develop scientific and engineering software to efficiently exploit super-computing capabilities (biomedical, geophysics, atmospheric, energy, social and economic simulations)

Departments

The MareNostrum 4 supercomputer

Total peak performance:

13,7 Pflops/s

Computing Resources

Data Forecast

Global Data Creation is About to Explode

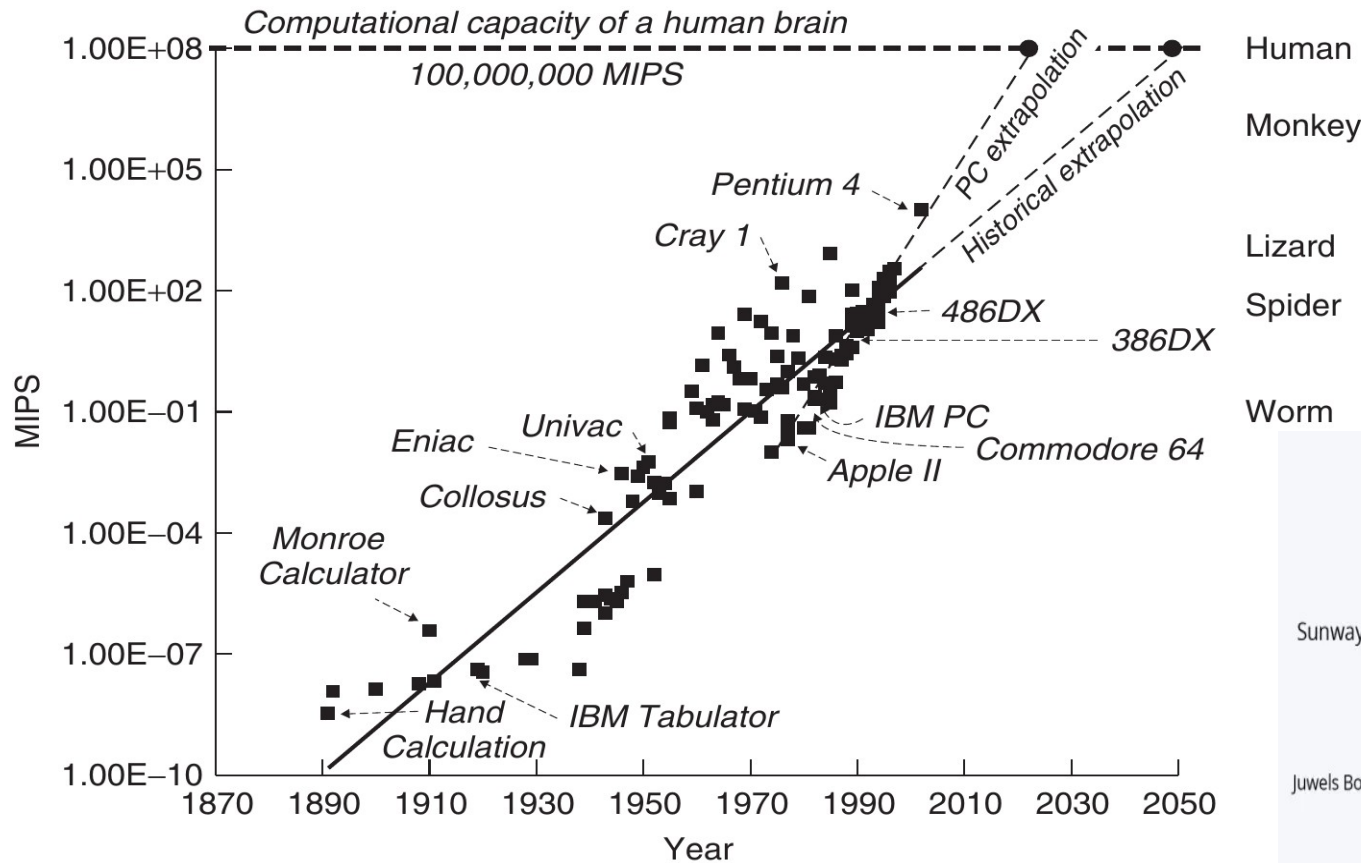

Actual and forecast amount of data created worldwide 2010-2035 (in zettabytes)

Total amount of calculations, in Petaflop per day, that have been used to train neural networks that have their own name and are referents in the Deep Learning community

Computational Capability ?

System	Manufacturer	Computational performance (in TeraFLOPS)*
Fugaku	Fujitsu/Riken	442,010.0
Summit	IBM	148,600.0
Sierra	IBM	94,640.0
Sunway TaihuLight	NRCPC	93,014.6
Selene	Nvidia	63,460.0
Tianhe-2A	NUDT	61,444.5
Juwels Booster Module	Atos	44,120.0
HPC5	Dell	35,450.0

It is estimated that sometime between the years **2025** and **2050**, a **personal computers** will exceed the calculation power of a human brain.
