What is Stress?

Biologically, Stress is defined as the condition of an organism caused by any physical or mental pressure by environment, in which the body starts behaving ***abnormally***.

What is the motivation for using iridology as a stress Diagnostic system?

Drawbacks of Conventional Systems

- Complex
- Accuracy
- **Later stages**

Solution

- A non-invasive methods of stress diagnostic environment
 - Iridology Map
 - Input Iris (Camera)
 - Applies artificial intelligence techniques
 - Digital System (Microprocessor System)

Iridology Map

How iridology tells about stress?

- Whenever a person suffers stress, rings are formed.
- The number of nerve rings corresponds to the amount of stress.
- More than 4 rings indicate nervous breakdown.
- If ring is formed in specific area of iris, it indicates that the client is feeling stress in that area.

Contraction Furrows or Stress Rings

Beneficiaries

- Infants
- Veterinary purposes
- Paralyzed persons
- Patients having issues while conveying their problem
